

**DENTAL MONITORING GO LIVE™**

The World's First Dynamic Aligner Tracking System

**Dental Monitoring (DM)** is a cloud based program that allows us to monitor and structure your treatment progress using a free, downloadable app on your smart phone. With DM we ask patients to take and upload a set of basic images using the self-explanatory app. This incredible tracking system means that your treatment is shaped by your own biology and compliance rather than a standard time frame.

This process, which only takes a few minutes every few days, yields high quality videos/ photographs that our doctors can view and use to assess treatment progress remotely. These visual images further allow us to determine whether you are ready to progress into wearing your next aligner.

Historically, orthodontists have monitored progress at each patient visit which could be as frequently as every 4 weeks to as infrequently as every 10 or 12 weeks. This exciting new technology allows us to closely monitor patient progress every few days! As a result patients in our practice need to be seen much less often, while being monitored more often

**A cloud based patented movement tracking platform.**

**A mobile application dedicated to patients**

**An online monitoring dashboard for doctors**
